In the Claims:

- 1. (canceled)
- 2. (currently amended) A process of initializing the state of an output memory circuit <u>latchable output buffer</u> of a scan cell located at the boundary of a logic circuit within an integrated circuit having a logic circuit comprising:
- A. scanning data into an input memory circuit of the scan cell while maintaining the scan cell in a first mode previding normal operation that enables connection of the logic circuit to the latchable output buffer;
- B. placing the <u>scan</u> cell in a second mode that disables normal operation of <u>connection of</u> the logic circuit to the latchable output buffer; and
- C. <u>enabling transfer of transferring</u> the data scanned into the input memory circuit into the output memory circuit <u>latchable output buffer</u> simultaneous with the placing the cell in <u>a second mode</u> a <u>mode that disables normal operation</u> of the logic circuit; and
- D. thereafter, disabling transfer of the data scanned into the input memory circuit into the latchable output buffer while maintaining the scan cell in the second mode.
- 3. (previously presented) The process of claim 2 in which the first mode is a preload scan operation and the second mode is a test operation.
- 4. (previously presented) The process of claim 2 in which the first memory circuit is a capture/shift memory circuit.
- (cancelled)
- 6. (currently amended) The process of claim 2 in which the maintaining includes enabling a first transmission gate between the logic circuit and the output memory sircuit

<u>latchable output buffer</u> and disabling a second transmission gate between the input memory circuit and the output memory circuit latchable output buffer.

7. (currently amended) The process of claim 2 in which the placing includes disabling a first transmission gate between the logic circuit and the <u>output memory circuit latchable</u> <u>output buffer</u> and enabling a second transmission gate between the input memory circuit and the <u>output memory circuit</u> latchable output buffer.
